

SOELBERG | INDUSTRIES

Dear Customer,

**RE: Custom Logo Branded Texture**

Soelberg Industries provides you the ability to customize your texture panels and add logo for branding purposes. Because a logo is the cornerstone of every company, we may require documentation of logo ownership.

We do not design or create logos. Soelberg Industries will not draw, re-draw or match a logo. We will manufacture from your design and require the following vector file formats in order to program a logo:

- AI (Adobe Illustrator)
- EPS
- DWG
- DXF

Because of variations in font and scale, we are not able to manufacture all logos and each logo is subject to review. Because of variation in pattern and depth, not all patterns are suitable for all logos. Logos are best achieved when selecting patterns from a ¼" core.

Specification of a logo does need to include whether the logo will be machined into the panel or cut completely through the panel. Cut-thru logos are only available in raw MDF panels and not available finished with a 3D foil laminate.

Because of limitations in tooling, the line quality of your logo may not be as sharp as your graphic file. Corners will have a slight radius and depending upon the depth of your logo in relation to the depth of the selected pattern, some laminate bridging may occur. Since we are manufacturing your design, Soelberg Industries is not responsible for dissatisfaction in line quality, sharp corners, scale or laminate bridging.
